

childhood immunizations

An immunization is one of the greatest medical advancements in history that has saved millions of lives in the 20th century. Early childhood immunizations are an important safeguard against serious illnesses for your baby. It is recommended by the American Academy of Pediatrics that children be immunized against twelve different diseases during the first two years of life.

Hepatitis B vaccine

Hepatitis B is an infection of the liver that is caused by a virus and can result in liver damage or failure. This vaccine can prevent this infection.

Diphtheria, Tetanus, and Pertussis (DTaP) vaccine

This vaccine protects against three diseases - Diphtheria, Tetanus, and Pertussis (whooping cough) in one vaccination.

Haemophilus Influenza Type B (HIB) vaccine

Haemophilus Influenza Type B isn't the viral infection that everybody calls the flu. It is caused by a bacterium that this vaccine can prevent.

Heptavalent Conjugate Pneumococcal (PCV) vaccine

This vaccine can help prevent serious pneumococcal diseases, such as meningitis and blood infections. Pneumococcal infection can cause serious illness and even death. Children under two years of age are at highest risk.

When you compare the risk of vaccines and the risk of diseases, vaccines are the safest choice.

Immunizations are the single most important way parents can protect their children against serious diseases.

Inactivated Polio (IPV) vaccine

Polio, short for Poliomyelitis, is a serious viral disease that starts with a fever and can lead to paralysis, muscle atrophy, and permanent disability. This vaccine is used to prevent polio.

Measles, Mumps, and Rubella (MMR) vaccine

This immunization prevents Measles, Mumps, and Rubella (German Measles) in one vaccination.

Influenza vaccine

The Influenza vaccine is more commonly known as the flu shot. The flu is more serious than the common cold and can be very dangerous in young children, especially those with certain medical conditions.

Varicella (Var) vaccine

This vaccine protects children against Chicken Pox, a viral infection which is highly contagious and results in a blister like itchy rash.
